Inquiry

Apixaban is a direct, selective inhibitor of the Xa factor, making it one of the xabans. These impede blood clotting and therefore serve as an anticoagulant even in the case of deep vein thrombosis. It is also admitted to the prophylaxis of venous thromboembolism after orthopedic surgery. Since 2012, EU approval has been for the treatment of ischemic strokes (stroke of the brain) and systemic embolism in adults with non-valvular atrial fibrillation.

Description

Formula $C_{25}H_{25}N_5O_4$

Molecular weight 459.50 g/mol

Molecular size small

Controlled Substance no

Precursor no

Indications Antithrombotic agents
