

Brimonidine

CAS

59803-98-4

[Inquiry](#)

Brimonidine is an imidazolin derivative that is a selective agonist of α_2 -adrenoceptors. As it binds less to α_1 -adrenoceptor, the side effects it mediates decrease. It acts sympathomimetic. Due to the lower chamber water formation and the increased uveoscleral outflow, the intraocular pressure decreases in the open-angle glaucoma (reserve drug). It can also be used to treat facial erythema, as it leads to the constriction of blood vessels in the facial area.

Description

Formula $C_{11}H_{10}BrN_5$

Molecular weight 292.14 g/mol

Molecular size small

Controlled Substance no

Precursor no

Indications Ophthalmological drugs
