

Desmopressin acetate

CAS
16679-58-6

Status
Commercial

[Inquiry](#)

Desmopressin acetate is a synthetically produced protein that mimics Vasopressin and binds significantly more strongly to the V2 receptor. By tying to the V2 receptor, more aquaporines are built up in the kidney, which allow water to flow back. As a result, it acts as an antidiuretic, which is why it contributes to the relief of diabetes insipidus.

Description

Formula $C_{46}H_{64}N_{14}O_{12}S_2$

Molecular weight 1,069.22 g/mol

Molecular size small

Controlled Substance no

Precursor no

Indications Pituitary and hypothalamic hormones and analogues
