Inquiry

Doxapram hydrochloride is a monohydrized pyrrolidinone derivative. It acts on the chemical receptors in the carotid and aortic range. This leads to an increase in respiratory rate and volume, which is why oxygen saturation in the blood increases. It treats post-narcotic or post-operative respiratory disorders and chronic lung diseases.

| Description          |  |
|----------------------|--|
| Formula              | C <sub>24</sub> H <sub>30</sub> N <sub>2</sub> O <sub>2</sub> • HCI • H <sub>2</sub> O |
| Molecular weight     | 432.98 g/mol   |
| Molecular size       | small  |
| Controlled Substance | no   |
| Precursor            | no   |
| Indications          | Other respiratory system products  |
