

Exemestane

CAS

107868-30-4

Status

Commercial

Inquiry

Exemestane has a steroid skeleton and can inhibit the aromatase inhibitors. This prevents the synthesis of estrogens from androgens in non-ovarian tissues. This effect makes hormone-dependent (estrogen receptor-positive) breast cancer treatable. At present, it is only used if tamoxifen is insufficient. In sports, it is abused by the almost dose-independent achievable dominance of male hormones. Exemestane has no gestagenic or estrogenic effects.

Description	
Formula	C ₂₀ H ₂₄ O ₂
Molecular weight	296.40 g/mol
Molecular size	small
Controlled Substance	no
Precursor	no
Indications	Endocrine therapy
