

Moxifloxacin hydrochloride

CAS

186826-86-8

Status

Commercial

[Inquiry](#)

Moxifloxacin hydrochloride is a fluoroquinolone antibiotic that binds to more topoisomerases than other known fluoroquinolones. Quinolones bind to the gyrase and inhibit them by complex formation. The resulting malfunction leads to cell death. Moxifloxacin has the best efficacy among fluoroquinolones against gram-positive and anaerobic bacteria. Moxifloxacin is assigned to the fourth generation of fluoroquinolones.

Description

Formula $C_{21}H_{25}ClFN_3O_4$

Molecular weight 437.89 g/mol

Molecular size small

Controlled Substance no

Precursor no

Indications Antibacterials for systemic use, Ophthalmological drugs
